ROOT CANAL OBTURATION

MM Bioceramic Sealer and Putty

Bioceramics:
Elevating Clinical Standards

MM MICRO
MEGA

MicroMega Bioceramic

Bioceramic cements **adhere strongly** to dentine, provide **excellent sealing** by limiting microleakage, and **promote healing** by stimulating the formation of new hard tissue, such as dentine or bone.

Developed in accordance with the highest scientific standards, these biomaterials offer a unique combination of excellent sealing ability, exceptional biocompatibility, and easy handling and use.

Benefits

- Easy application
- Bacteria reduction
- Support healing
- Natural regeneration
- Tight seal

Syringe of 2g

+ 20 tips

Syringe of 0.5g

MM Bioceramic Sealer

MM Bioceramic sealer is used for root canal obturation, combined with a Gutta Percha cone, as a thin layer providing excellent flow and tight seal.

Product features

- Ready-to-use
- Bioactive
- High Alkalinity (pH 12)
- Excellent flowability
- High radiopacity
- Non staining
- Suitable for cold and warm technique

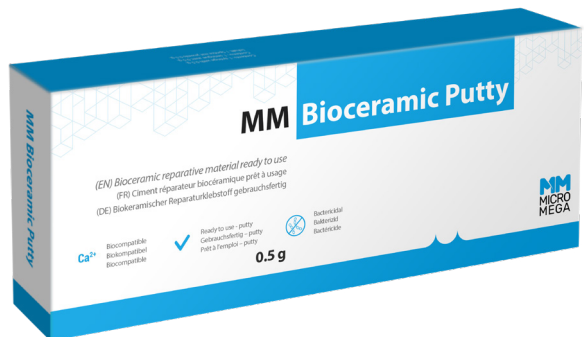

Working time : 1h
Setting Time : 2h

MM Bioceramic Putty

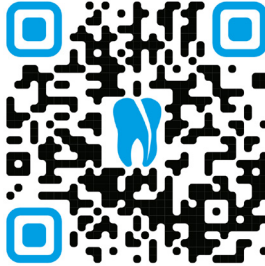

MM Bioceramic Putty is a denser material indicated for root repairs (perforations, resorptions, pulp capping) or retrograde fillings in endodontic surgery.

Product features

- Ready-to-use
- Bioactive
- High Alkalinity (pH 12)
- Good radiopacity
